Plotly Visualization

- key variables describing the client and its loan(s)

- comparison between this client and other clients

Brief explanation (risk rationale)

The application signals shown in this report indicate the client's repayment capacity is supported by their income and employment profile, with an overall debt burden that appears manageable relative to those resources. In addition, the credit-history/behavioral indicators available in the application data (e.g., repayment and delinquency-related flags, utilization-style measures) do not show elevated near-term stress. Finally, the requested loan characteristics (amount and term) appear broadly aligned with affordability based on the client's profile and peer comparison shown in the visuals. Overall, these factors support a low-risk profile, consistent with a non-default prediction.
